

TOTAL DURATION	PRESENTERS	SPEAKER LIMIT	TARGET PACE
2:00 Minutes	4 Speakers	30s / Speaker	70 words / Person

Slide 1

Cover & Strategic Hook

ABIR

~12s

28 words

Visual Cue: Abir stands at the center, slide 1 is displayed on screen, and the presentation timer is started.

“ Good morning, investors. I am Abir, CEO of Team twenty two. We present Urban Glow Grid, an IoT enabled sustainable grid simulator aligning with SDGs seven and eleven.

Focus: Pitch Hook, SDGs, Team 22 Introduction

Pace: Clear, energetic opening

Slide 2

Product Concept & Industrial Vision

ABIR

~5s

12 words

Visual Cue: Abir gestures to slide 2 showing the high-fidelity AI-generated finished product concept.

“ Our educational console empowers users to manage energy networks, accelerating energy learning.

Focus: Value Proposition, SDG 7 & 11

Target: 30,000 Units Scaled Production

Slide 3

Physical MVP Prototype Architecture

ISMAIL

~30s

70 words

Visual Cue: Ismail steps up, gestures to the physical wood prototype and highlights the bottom wiring layout on the slide.

“ I am Ismail. Our physical prototype contours Paris over seven birch wood panels structured by eight pillars, containing twenty one building slots. Beneath, an Arduino Uno and an MCP3008 multiplexer read six rotary dials and three buttons on a solderless breadboard, driving six addressable LED stripes. Rocker power switches and dual speakers handle real time energy state alarms, validating our core hardware electrical architecture. I will now pass to Sofiane.

Focus: Hardware Components, Topography Chassis

Details: Arduino Uno, MCP3008 ADC, LEDs, Speakers

Slide 4

Prototype BOM vs. Wholesale Estimates

SOFIANE

~30s

70 words

Visual Cue: Sofiane references the BOM comparison table on slide 4, pointing out the major cost collapse.

“ Thank you, Ismail. I am Sofiane. Sourcing our nineteen prototype components from Taobao retail distributors costs exactly one hundred and fifty CNY. However, at a scale up volume of thirty thousand units, our raw hardware costs collapse to thirty CNY. We achieve this by design for manufacturing: integrating microcontroller chipsets directly onto custom PCBAs and shifting from three D printing to rapid plastic injection molding. I now pass to Mohamed.

Focus: BOM Sourcing, Cost Reduction Rationale

Data: 150 CNY Proto DIY vs. 30 CNY Bulk Hardware

Slide 5 Manufacturing Strategy & Process Evolution

MOHAMED

~30s

70 words

Visual Cue: Mohamed points to the timeline on slide 5 showing Phase 1 manual pilots and Phase 2 outsourced automation.

“ Thank you, Sofiane. I am Mohamed. In Phase one, months one to four, we manually assemble with four operators to calibrate dials, program PCBAs, and run QC gates. In Phase two, month five, we delegate assembly to contract suppliers in the Yangtze River Delta, automating production lines. Sourced from Ningbo, we maintain a safety stock of one thousand units, shipping by sea or air to sell three thousand consoles monthly.

Focus: Process Evolution, Assembly Timeline

Data: 1,000 Buffer Stock, 3,000 Monthly Sales Target

Slide 6 Financial Business Model & Unit Economics

ABIR

~12s

28 words

Visual Cue: Abir returns, directing the judges' attention to the wholesale financial stats on slide 6.

“ At one hundred and twenty CNY cost, selling at two hundred and ninety nine CNY yields a sixty percent gross margin. Rotterdam and Chicago hubs secure local distribution.

Focus: Cost Price, B2B Pricing, Global Warehouses

Data: 120 CNY Cost (Coût de Revient), 299 CNY Price

Slide 7 Q&A Session

ABIR

~1s

2 words

Visual Cue: Abir invites questions while the whole team bows slightly in appreciation.

“ Thank you.

Focus: Call to Action, Q&A Invitation

Pace: Polite and welcoming tone
